Objective

Graduated in Computer Science, currently pursuing a Master's degree in Data Science, with a solid background in Python programming, data analysis, and machine learning. Skilled in the ability to extract valuable insights from raw data through statistical analysis and modeling. Looking to leverage analytical skills, problem-solving abilities, and programming knowledge to create data-driven solutions that enable informed business decisions as an entry-level Data Scientist.

Education

Visvesvaraya Technological University

BE in Computer Science and Engineering

Nov 2020 – June 2024

- CGPA: 7.0/10.0

Presidency University

M.TECH in Data Science

Sept 2025 – Present

- CGPA: 9.4/10.0

Experience

AI/ML Intern

Varcons Technologies Pvt. Ltd.

- Designed and implemented a machine learning model to analyze sentiment on social media platforms, achieving an accuracy of 85% in sentiment classification and providing actionable insights for over 10,000 social media posts.
- Used Pandas, Numpy, and Scikit-learn for data preprocessing and model evaluation, handling datasets of up to 10,000 records.
- Prepared a report identifying model flaws, leading to a 10% improvement in model performance after adjustments.

Projects

Smart Chair for Posture Correction

- Conceived and built a smart chair prototype equipped with sensors to monitor posture, reducing the risk of ergonomic health issues by 20% based on initial prototype evaluations.
- Successfully integrated hardware and coding to create an innovative solution, completing the project 40% ahead of schedule and receiving positive feedback from 12 industry professionals .
- Hypothetically, the project has the potential to improve workplace ergonomics and positively impact the health of **10 million people** or more by reducing posture-related ailments.

Social Media Sentiment Analysis for Mobile Application

- Analyzed social media data to gauge public sentiment using Python and machine learning algorithms, processing over 50,000 posts with an accuracy of 85%.
- Generated sentiment analysis reports and visualizations, providing actionable insights that led to a 20% improvement in social media engagement.

Customer Churn Intelligence Platform

- Developed an end-to-end customer churn prediction platform using Python, Scikit-learn, PostgreSQL, and FastAPI, covering data preprocessing, feature engineering, model training, and API-based prediction.
- Compared Logistic Regression, Random Forest, and XGBoost models; achieved 0.842 ROC-AUC with Logistic Regression and analyzed churn-risk classification using precision, recall, F1-score, and threshold analysis.

Skills

Programming Languages: Python, SQL, Java, C++, JavaScript, HTML, CSS.

Tools: Jupyter Notebook, Google Colab, VS Code, Git, GitHub, MySQL, PostgreSQL, Power BI, Tableau, Docker, Postman, Linux.

Soft Skills: Problem Solving, Communication, Critical Thinking, Team Collaboration, Time Management
